

MASTER THE LOGISTIC PIPELINE
FROM MINE TO END CUSTOMER WITH

COALMAN

Designed to track coal from mine to customer, CoalMan is an all-inclusive coal management system designed to suit all mining methods.

CoalMan can help you to meet your complex contract quality requirements, harmonising logistical business processes to enable faster, better decisions.

- One system to track the process from pit to customer
- Group-based to maximise efficiency
- Interface directly with the Pulse Mining ERP
- Access real-time, accurate information when and where you need it
- Gain complete visibility and management of coal from pit to customer when combined with Pulse Mining's Operations Module.

COALMAN

BLOCKED VESSELS LIST

Safeguard your product by gaining access to a listing of potentially problematic shipping clients.

LONG-TERM FORECASTING

'What if' analysis or snapshots for future comparison against current position.

PROVISIONAL INVOICING

Increase communication with buyers and track ongoing reversals or re-issues.

INTEGRATE

Integrate with Pulse Mining ERP modules - Financials and Operations, or 3rd party systems such as SAP.

REAL-TIME CARGO BUILDING

See each penalty, bonus or rejection as results are available to allow optimisation of blends to contract requirements.

DISTRIBUTION OF INFORMATION

View live data and marketing position to enable quick and accurate decisions.

ENSURE THAT THE RIGHT MIX OF MATERIALS IS TRANSPORTED FROM THE RIGHT STOCKPILES ON THE RIGHT TRANSPORT AT THE RIGHT TIME FOR THE RIGHT VESSELS ARRIVING IN PORT...

COALMAN

BLENDING SCHEDULES & LOGISTICS

Manage active or projected scheduled logistics movements while ensuring complex contract compliance and profit maximisation.

- Best-fit blends for each sale
- Visibility of contract quality compliance during the railing process
- Tracking of all balances of loans, borrowings and other inter-company purchases
- Profit maximisation by matching projected and available product to contract requirements.

CUSTOMERS & CONTRACTS

Total management of transactions associated with the entire supply-chain process.

- Definition and storage of complex contract quality details
- Multiple pricing status
- Long-term planning through forecast contracts
- Contract documentation status tracking
- Domestic, export, inter-company and swap/loan contracts
- Modeling, including what-if analysis.

INVOICING & RECEIPTING

A variety of invoice types and management tools to save you time and money.

- Pre-invoicing visibility to enable review and regeneration
- Support for offshore invoicing through a 3rd country
- Invoice revisions including accruals, provisional and final invoice classifications
- User-defined invoice numbering
- The ability to link internal and external loans, swaps and purchases.

SALES & FORECASTS

Enhance your organisation's performance; remove the guesswork and base important decisions on accurate information.

- Record sales details including stem details, port allocation and omissions
- Record stockpile and production shortfalls
- Modeling for future comparison against current position
- Slice and dice data against multiple parameters, such as client, material or sale type.
